Benefits of using Technology in the Classroom

Changing Times

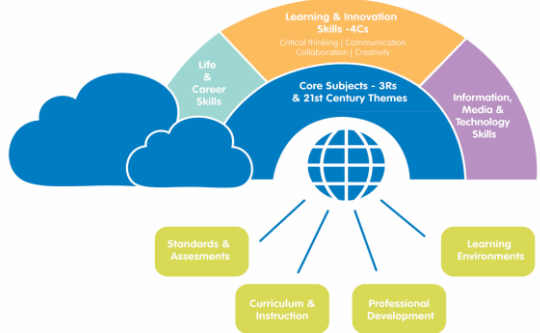

Classrooms today are largely unchanged since the industrial revolution, and yet, the rest of the world has changed enormously since then. To succeed in a competitive global economy, employers are looking for creative staff who are fresh and possess modern skills; they need to be able to work in groups, to pose and solve complex problems and be able to communicate across teams and borders.

21st Century Skills

Students are naturally creative and innovative; they will also develop new critical thinking productivity and leadership skills, which will enable them to be responsible, self-directed learners and employees.

Content

An endless amount of content is available through the use of devices in the classroom – Today, almost all textbooks have been converted to a digital version to deal with the issue surrounding the weight of the schoolbag. The devices allow students instant access to the latest news, information, statistics etc.

Develop Organisational Skills

Students will become more organised and efficient as they will no longer need to spend as much time at school lockers or taking notes that they could misplace/forget. All the students content will be stored in the one place – The Device.

ePortfolios

Student will undergo continuous assessment as part of the new Junior Cycle and ePortfolios will be part of how students present their work.

Fun Learning Environment

Research shows that students who are engaged in their learning will naturally perform better; technology allows teachers to find even more ways of engaging the variety of learning styles in their classroom.

Insurance

It is highly recommended that you purchase insurance for your child's device to cover any accidental damage which may occur. This insurance is available through the Wriggle Online Store when purchasing the device. This policy is specific to mobile devices being used in schools.
